SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- . . figures not available.
- . . . figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed.
- P preliminary figures.
- † revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- . . nombres indisponibles.
- . . . n'ayant pas lieu de figurer.
- néant ou zéro.
- - nombres infimes.
- P nombres provisoires.
- † nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

INTRODUCTION

Consumer Finance Surveys

Historical Perspective

Since the early 1950's, Statistics Canada has conducted periodic surveys of incomes of families and individuals. Initially, the surveys were restricted to the non-farm population but starting with the year 1965, the surveys have used a sample representing virtually all private households in Canada. Since 1972, these surveys have been conducted annually in the spring.

The main concepts underlying the estimates have remained the same. The income concept has not changed since the first report, for the year 1951, was published. The family unit has also been defined consistently.

The range of data handled by these surveys has, however, continued to expand to meet anticipated needs of data analysts and policy makers. Reflecting this, the contents of this publication have been periodically modified. Several new series of supplementary statistical reports have been introduced in the course of recent years and a number of special studies dealing with selected survey topics in greater depth have also been published.¹ Selected micro-data files are now also available for some of the more recent surveys.

The annual programme of Consumer Finance Surveys is now comprised of two rotating variants. In one year, the survey is conducted as a supplement to the Labour Force Survey carried out in the month of April. The sample is *large*, capable of generating income distributions of reasonable accuracy for each province. In several instances estimates are also published for categories which are relatively small. The subject-matter content of the survey is kept restricted to only basic questions on income and work experience.

In the following year, a different approach is used. The survey is conducted independently of the Labour Force Survey. The sample is *small*, less than half of the first variant, and there is a corresponding reduction in detail being published. For example, data for the four provinces in the Atlantic Region are combined into a single distribution. Details from the three Prairie Provinces are similarly merged into a common income distribution. The questionnaire content, however, is substantially expanded to collect, by means of a supplement, new or more recent data on various income-related phenomena. This approach to the conduct of surveys has been in effect since 1972.

Enquêtes sur les finances des consommateurs

Historique

Depuis le début des années 50, Statistique Canada mène une série d'enquêtes sur les revenus des familles et des particuliers. Au début, les enquêtes portaient exclusivement sur la population non agricole, mais à partir de l'année 1965, les enquêtes comportent un échantillon représentatif de pratiquement tous les ménages privés au Canada. Depuis 1972, Statistique Canada mène ces enquêtes chaque année au printemps.

Essentiellement, les principes à la base des estimations sont demeurés inchangés. La notion de revenu n'a pas changé depuis la publication du premier bulletin, pour l'année 1951. De même, la définition de l'unité familiale est demeurée la même.

Toutefois, l'étendue des données recueillies par ces enquêtes n'a pas cessé de croître pour répondre aux besoins prévus des analystes et des technocrates. C'est pourquoi le contenu de cette publication a subi quelques modifications de temps à autre. Plusieurs nouvelles séries de bulletins statistiques supplémentaires ont été lancées au cours des dernières années et nombre d'études spéciales sur des sujets approfondis ont été publiées¹. On peut obtenir des fichiers de microdonnées pour certaines des enquêtes les plus récentes.

Le programme annuel des Enquêtes sur les finances des consommateurs comprend actuellement deux procédures en alternance. Une année, l'enquête s'ajoute à celle sur la population active qui a lieu en avril. L'échantillon de *grande* taille permet d'obtenir des répartitions assez exactes du revenu pour chaque province. Dans plusieurs cas, des catégories relativement petites font aussi l'objet d'estimations. Le contenu de l'enquête se limite à des questions essentielles portant sur le revenu et le travail.

L'année suivante, la méthode est toute autre. L'enquête est menée indépendamment de celle sur la population active. L'échantillon est de *petite* taille, moins de la moitié de celui de la première procédure, et il en résulte une réduction correspondante des renseignements publiés. Par exemple, les données pour les quatre provinces de la région de l'Atlantique sont rassemblées dans une seule répartition. De même, celles provenant des trois provinces des Prairies sont réunies dans une même répartition du revenu. Par contre, le contenu du questionnaire est élargi considérablement de façon à recueillir, par le truchement d'un supplément, des données nouvelles ou plus récentes sur plusieurs phénomènes reliés au revenu. Cette façon de procéder existe depuis 1972.

¹ The list of published reports is on the back cover.

¹ La liste des bulletins publiés figure sur la couverture arrière.

Present Survey

This report is based on the data collected by the Consumer Finance Survey in the month of April 1976. Information on incomes received in 1975 was sought from a *large* sample, of approximately 35,000 households. In terms of content, this report is basically consistent with the previously published reports based on findings of large sample surveys. However, there are several areas where changes in the presentation of data should be noted.

Some of the modifications have been made so that consistency with currently published Labour Force statistics is maintained. For example, the present report is concerned with incomes received by individuals 15 years of age and over, while previously, incomes of individuals 14 years of age were also included.² In addition to the minor coverage difference, estimates classified by education and tenure are not exactly comparable to similar estimates in earlier publications.

Low income statistics in this report are based on the "revised" low income cut-offs which were introduced in the 1973 publication. The past two years have been a transition period and low income tabulations based on both the "revised" and the original or "updated" low income cut-offs were included in this series of reports. Commencing this year, low income statistics using the updated cut-offs will not be published.³

For a more detailed description of the changes outlined above, refer to "Notes and Definitions", page 16.

² A description of the impact on the income distributions of individuals is presented in "Sources and Methods", page 150.

³ Statistics based on the updated cut-offs are still available on request for comparisons extending back further than 1973 on the basis of a constant set of low income cut-offs which have been updated by the Consumer Price Index each year.

L'enquête actuelle

Ce bulletin est fondé sur les données recueillies par l'Enquête sur les finances des consommateurs tenue au mois d'avril 1976. On a obtenu des renseignements sur les revenus en 1975 d'après un échantillon de *grande* taille, d'environ 35,000 ménages. Au point de vue du contenu, ce bulletin est fondamentalement conforme aux publications antérieures qui se basaient sur les résultats d'enquêtes à grand échantillon. Il convient cependant de noter que des changements ont été apportés à la présentation des données dans plusieurs secteurs.

Certaines des modifications visent à conserver l'uniformité de nos données avec les chiffres de la population active qui sont publiés actuellement. Par exemple, ce bulletin prend en compte le revenu des particuliers de 15 ans et plus alors qu'il comprenait auparavant le revenu des particuliers de 14 ans et plus². Outre ce changement mineur du champ d'observation, il faut noter que les estimations selon l'instruction et selon le mode d'occupation ne sont pas comparables en tous points à celles des publications précédentes.

Les statistiques sur le faible revenu contenues dans le présent bulletin sont basées sur le concept de seuil de faible revenu "révisé" qui a été introduit dans la publication de 1973. Au cours des deux dernières années, afin d'assurer la transition, des totalisations basées à la fois sur les seuils de faible revenu "révisés" et sur les seuils originaux ou seuils "actualisés" ont été utilisées dans cette série de publications. À partir de cette année, nous ne publierons plus les seuils actualisés dans nos statistiques sur le faible revenu³.

Pour une description plus détaillée des changements susmentionnés, voir "Notes et définitions", page 16.

² Une description de l'incidence sur la répartition du revenu des particuliers figure dans "Sources et méthodes", page 150.

³ On peut toujours se procurer sur demande, à des fins de comparaison avec les années antérieures à 1973, des statistiques basées sur les seuils actualisés. Elles sont tirées d'une série permanente de seuils de faible revenu qui ont été actualisés chaque année en fonction de l'Indice des prix à la consommation.

SUMMARY

Income Distributions by Size, 1975

Families

The average income of families rose from \$14,833 in 1974 to \$16,613 in 1975, an increase of 12% over the year. However, due to the rise in the Consumer Price Index, the real gain in incomes amounted to 1%. Average incomes in the provinces ranged from a low of \$12,372 in Prince Edward Island to a high of \$18,047 in Ontario. The rate of increase in the average income of families resident in metropolitan areas and non-metropolitan areas was about the same. Average incomes in metropolitan and non-metropolitan areas were \$17,832 and \$14,395 respectively.

Some of the variability in the level of family income can be attributed to differences in characteristics of families. Family income, for example, is closely related to the age of the head. Normally, family income rises until the head reaches middle age and then declines. Thus, in 1975, families headed by young persons aged less than 25 years or by older persons aged 65 years and over received, on the average, considerably less income than those headed by persons aged 25-64 years. Education of the head is another factor which exerts a great influence on the level of family income. The average income of families whose heads had a university degree was twice that of families whose heads received schooling of eight years or less.

The family size also tends to affect income. The average income of families with at least three income recipients was \$23,820 compared with only \$12,794 for families with one income recipient.

As was to be expected, the general rise in family income produced an upward shift in the distribution. The proportion of families receiving less than \$5,000 dropped from 10.6% in 1974 to 8.4% in 1975. In the upper part of distribution, the proportion of families receiving \$15,000 or more increased from 41.6% in 1974 to 50.3% in 1975. However, such comparisons over time have greater relevancy if carried out in terms of constant rather than current dollars as changes in the prices of goods change the purchasing power of currency. If in data conversion to constant dollars the year 1971 is used as the base year, corresponding 1974 and 1975 proportions become 15.3% and 15.6% for the "under \$5,000" income class, and 24.7% and 26.5% for the "\$15,000 plus" category.

SOMMAIRE

Répartition du revenu selon la taille du revenu, 1975

Familles

Le revenu moyen des familles est passé de \$14,833 en 1974 à \$16,613 en 1975, soit une augmentation de 12 %. Cependant, en raison de l'augmentation de l'Indice des prix à la consommation, l'accroissement réel du revenu n'a été que de 1 %. Au niveau des provinces, le revenu moyen s'est échelonné entre une valeur plancher de \$12,372 dans l'Île-du-Prince-Édouard et une valeur plafond de \$18,047 en Ontario. Le taux d'augmentation du revenu moyen des personnes demeurant dans des régions métropolitaines et non métropolitaines était sensiblement le même. Le revenu moyen dans les régions métropolitaines et non métropolitaines s'est respectivement chiffré à \$17,832 et \$14,395.

Jusqu'à un certain point, le niveau variable du revenu de la famille est fonction des différences des caractéristiques familiales. Par exemple, le revenu familial est étroitement lié à l'âge du chef de famille. De façon générale, il augmente jusqu'à ce que le chef atteigne l'âge mûr; puis il commence à diminuer. Ainsi, en 1975, les familles dont les chefs étaient âgés de moins de 25 ans ou de 65 ans et plus ont perçu en moyenne un revenu beaucoup moins élevé que celles dont les chefs avaient entre 25 et 64 ans. Le niveau de scolarité du chef est un autre facteur qui exerce une grande influence sur le niveau du revenu de la famille. Le revenu moyen des familles dont les chefs avaient un diplôme universitaire était deux fois plus élevé que celui des familles dont les chefs avaient au plus huit ans de scolarité.

La taille de la famille se répercute également sur le revenu. Le revenu moyen des familles où au moins trois personnes recevaient un revenu était de \$23,820, comparativement à \$12,794 seulement pour les familles avec un seul bénéficiaire d'un revenu.

Comme il fallait s'y attendre, l'augmentation générale du revenu des familles a entraîné un déplacement vers le haut de la répartition. La proportion de familles recevant moins de \$5,000 est passé de 10.6 % en 1974 à 8.4 % en 1975. Dans la classe supérieure, la proportion des familles recevant \$15,000 ou plus est passée de 41.6 % en 1974 à 50.3 % en 1975. Toutefois, de telles comparaisons ne sont vraiment valables que si elles sont exprimées en dollars constants plutôt qu'en dollars courants car le changement du prix des produits modifie le pouvoir d'achat des consommateurs. Si, pour la conversion des données en dollars constants, on utilise l'année 1971 comme base, les proportions correspondantes de 1974 et 1975 passent à 15.3 % et 15.6 % pour la tranche de revenu de "moins de \$5,000" et à 24.7 % et 26.5 % pour celle de "\$15,000 et plus".

Unattached Individuals

The average income of unattached individuals increased by 8% from \$6,099 in 1974 to \$6,595 in 1975. Average incomes in the provinces ranged from a low of \$4,933 in New Brunswick to a high of \$7,198 in British Columbia in 1975. In metropolitan areas, the average income of unattached individuals increased by 8% to \$6,974 while that of unattached individuals living in non-metropolitan areas increased by 5% to \$5,508. The proportion of unattached individuals receiving less than \$2,000 dropped from 18.0% in 1974 to 14.7% in 1975, while the percentage of those receiving \$10,000 or more increased from 18.5% to 22.2%.

All Units

The average income of all units (unattached individuals and families combined) increased by 11% from \$12,437 in 1974 to \$13,805 in 1975. It should be noted that the preponderance of unattached individuals at the lower end of the income scale exerts a downward pressure on the average income of all units.

Individuals with Income

The average income of all individual income recipients increased by 11% from \$7,416 in 1974 to \$8,208 in 1975. Average incomes in the provinces ranged from a low of \$5,577 in Prince Edward Island to a high of \$8,888 in British Columbia. The rate of increase in the average income of individuals resident in metropolitan areas and non-metropolitan areas was about the same. Average incomes in metropolitan and non-metropolitan areas were \$8,700 and \$7,240 respectively.

The average income of males increased by 11% from \$9,749 in 1974 to \$10,865 in 1975 and that of females rose by 13% from \$4,255 in 1974 to \$4,788 in 1975. One important factor determining the level of income is the number of weeks worked. The proportion of all male income recipients that reported having worked 50-52 weeks was 60%, whereas only 39% of all female income recipients worked as many weeks in 1975. Of all female income recipients, one in four reported government transfer payments as the major source of income compared to one in 10 males.

Quintile Distributions

It is estimated that in 1975 families and unattached individuals in the lowest quintile received 4.0% of the aggregate income of all units while those in the highest quintile received 42.6% compared to 4.0% and 42.5% respectively in 1974. The lowest quintile consisted mostly of unattached individuals (69.5% of all

Personnes seules

Le revenu moyen des personnes seules est passé de \$6,099 en 1974 à \$6,595 en 1975, ce qui représente une augmentation de 8 %. Au niveau des provinces, le revenu moyen s'est échelonné entre \$4,933 au Nouveau-Brunswick et \$7,198 en Colombie-Britannique. Dans les régions métropolitaines, le revenu moyen des personnes seules a augmenté de 8 % passant à \$6,974 et pour les autres de 5 %, passant à \$5,508. La proportion de personnes seules recevant un revenu de moins de \$2,000 est tombée de 18.0 % en 1974 à 14.7 % en 1975, alors que le pourcentage de celles-ci touchant \$10,000 ou plus est passé de 18.5 % à 22.2 %.

Ensemble des unités

Le revenu moyen de l'ensemble des unités (personnes seules et familles) a augmenté de 11 %, passant de \$12,437 en 1974 à \$13,805 en 1975. Il faut noter que le grand nombre de personnes seules à l'extrémité inférieure de la fourchette des revenus fait descendre le revenu moyen de l'ensemble des unités.

Particuliers ayant un revenu

Le revenu moyen de tous les particuliers recevant un revenu a augmenté de 11 %, passant de \$7,416 en 1974 à \$8,208 en 1975. Au niveau des provinces, les revenus moyens se sont échelonnés entre une valeur plancher de \$5,577 dans l'Île-du-Prince-Édouard et une valeur plafond de \$8,888 en Colombie-Britannique. Le taux d'augmentation du revenu moyen des personnes demeurant dans des régions métropolitaines et non métropolitaines était sensiblement le même. Les revenus moyens dans les régions métropolitaines et non métropolitaines se sont chiffrés respectivement à \$8,700 et \$7,240.

Le revenu moyen des hommes a progressé de 11 %, passant de \$9,749 en 1974 à \$10,865 en 1975; celui des femmes est passé de \$4,255 en 1974 à \$4,788 en 1975, soit une augmentation de 13 %. Un facteur important déterminant le niveau du revenu est le nombre de semaines de travail. La proportion de tous les hommes bénéficiant d'un revenu qui ont déclaré avoir travaillé 50-52 semaines était de 60 % contre seulement 39 % chez les bénéficiaires de sexe féminin. De toutes les femmes ayant un revenu, une sur quatre a déclaré que les paiements de transfert constituaient la principale source de revenu; chez les hommes, la proportion était de un sur 10.

Répartition par quintile

Selon les estimations, les familles et personnes seules du quintile inférieur ont reçu 4.0 % du revenu global de l'ensemble des unités en 1975; celles du quintile supérieur ont eu 42.6 %; les chiffres correspondants en 1974 étaient respectivement de 4.0 % et de 42.5 %. Le quintile inférieur comprend surtout les personnes seules (69.5 % de

units in the quintile), whereas the highest quintile contained almost exclusively (97.5%) families.

If families alone are considered, the share of income going to the families in the lowest quintile decreased to 6.2% from 6.3% a year earlier. At the same time the upper income limit for this quintile shifted to \$8,214 from \$7,480 in 1974, a rise of 10% measured in current dollars.

Estimates show that in 1975 the individuals in the lowest quintile received 2.5% of the aggregate income of all individuals while those in the highest received 47.9% compared to 2.6% and 48.1% respectively in 1974. The lowest quintile consisted mostly of females (68.8% of all individuals in the quintile), whereas the highest quintile contained almost exclusively (91.2%) males.

Low Income Statistics

Using the revised⁴ cut-offs, the estimates indicate that the incidence of low income among families increased from 11.3% in 1974 to 11.8% in 1975. The incidence of low income in families headed by males rose from 8.5% in 1974 to 9.2% in 1975, while the proportion of families headed by females falling below the low income cut-offs showed a decrease from 41.0% to 40.0%. The percentage of unattached individuals falling below the low income cut-offs increased, from 37.5% in 1974 to 38.1% in 1975.

⁴ For a description of revised cut-offs, see "Notes and Definitions", page 18.

l'ensemble des unités du quintile) alors que le quintile supérieur est presque entièrement composé de familles (97.5 %).

Si l'on tient compte des familles seulement, la part attribuée aux familles du dernier quintile est passée à 6.2 % contre 6.3 % l'année précédente. En même temps, le seuil du revenu supérieur pour ce quintile est passé à \$8,214 par rapport à \$7,480 en 1974, soit une hausse de 10 % en dollars courants.

Selon les estimations, les particuliers du quintile inférieur ont reçu, en 1975, 2.5 % du revenu global de tous les particuliers alors que ceux du quintile supérieur en ont eu 47.9 %; en 1974, les chiffres correspondants étaient respectivement de 2.6 % et de 48.1 %. Le quintile inférieur était composé surtout de femmes (68.8 % de l'ensemble des particuliers du quintile), alors que le quintile supérieur comprenait presque uniquement des hommes (91.2 %).

Statistiques des faibles revenus

Les estimations fondées sur les seuils révisés⁴, montrent que l'incidence du faible revenu au sein des familles a augmenté, passant de 11.3 % en 1974 à 11.8 % en 1975. L'incidence des familles à faible revenu dont le chef est de sexe masculin est passé de 8.5 % en 1974 à 9.2 % en 1975, alors que la proportion des familles dont le chef est de sexe féminin et qui sont en deçà des limites de faibles revenus est tombée de 41.0 % à 40.0 %. Le pourcentage des personnes seules dont le revenu se situe en deçà du seuil de faible revenu a augmenté, passant de 37.5 % en 1974 à 38.1 % en 1975.

⁴ Pour une description des seuils révisés, voir "Notes et définitions", page 18.

NOTES AND DEFINITIONS

Families, Individuals and Their Characteristics

Family

The family in this publication is defined as a **group of individuals sharing a common dwelling unit and related by blood, marriage or adoption**. Thus, all relatives living together at the time of the survey (April 1976) were considered to comprise one family whatever the degree of family relationship. No recall or adjustment was made to account for persons who were members of the family for part of the year and who left because of marriage, death or other reasons. Some family units existing at the time of the survey were not family units during the whole year – for example, a couple who married in the middle of 1975. Aside from single sons and daughters, other relatives most commonly found living in the household were married sons and daughters and widowed parents.

The definition of the family used in the present study is a common definition of what constitutes a family – it is referred to as the “economic family” definition. It is recognized, however, that it is not a concept which is suitable for all studies which may be made in respect of families and that for many purposes a modified definition would be useful. In fact, other definitions are employed for other purposes. Demographic studies made in connection with population censuses normally use a more restricted classification – the family consists of the husband, wife and any unmarried children resident with them, or one parent and unmarried children.⁵ For budget studies, which investigate patterns of family expenditure, the important criterion is whether or not relatives living together pool their incomes for expenditure purposes; that is, whether they constitute one spending unit or several spending units. In this definition, it is allocation of income as well as relationship which determines what constitutes a family (although in Canadian studies unmarried children are included as members of their parents’ family and not treated as separate units).

Unattached Individual

An unattached individual is a **person living by himself or rooming in a household where he is not related to other household members**.

All Units

The term “all units” is sometimes used in the text of this report to designate, collectively, unattached

⁵ Income distributions based on this definition are being published in *Family Incomes (Census Families)*, 1975, Catalogue 13-208.

NOTES ET DÉFINITIONS

Les familles, les particuliers et leurs caractéristiques

Famille

On définit ici la famille comme un **groupe de personnes qui partagent le même logement et qui sont unies par filiation, mariage, ou adoption**. Ainsi, tous les parents qui vivent ensemble lors de l’enquête (avril 1976) forment une seule unité familiale, quel que soit leur lien de parenté. On n’a effectué aucun rajustement pour tenir compte des membres d’une unité familiale qui ont quitté cette dernière pour une raison ou une autre (mariage, décès, etc.). Certaines unités familiales qui existaient au moment de l’enquête n’ont pas été des unités familiales pendant toute l’année (un couple marié au milieu de 1975, par exemple). Outre les enfants célibataires, les autres personnes qui composent le plus souvent le ménage sont des enfants mariés, un père veuf ou une mère veuve.

La définition de la famille utilisée dans cette étude est celle de la “famille économique”. On admet cependant que cette définition ne s’applique pas toujours à toutes les études que l’on peut faire sur les familles et que, dans bien des cas, il serait utile de la modifier. De fait, on utilise d’autres définitions lorsque les buts sont différents. Les études démographiques entreprises à la suite des recensements de la population utilisent habituellement une classification plus restreinte; la famille se compose alors du mari, de la femme et de tous les enfants célibataires qui vivent avec eux, ou d’un des parents et d’enfants célibataires⁵. Dans les études de budget, où l’on examine les habitudes de dépenses des familles, il importe avant tout de savoir si les parents qui vivent ensemble mettent ou non leurs revenus en commun, c’est-à-dire s’ils constituent une seule ou plusieurs unités de dépense. Cette définition se fonde donc à la fois sur le mode de répartition du revenu et sur le lien de parenté (bien que dans les études effectuées au Canada, les enfants célibataires soient considérés comme membres de la famille de leurs parents et non comme unités distinctes).

Personne seule

Une personne seule est une **personne qui vit seule ou qui occupe une chambre dans un ménage avec lequel elle n’a aucun lien de parenté**.

Ensemble des unités

Le terme “ensemble des unités” est utilisé dans ce bulletin pour désigner collectivement les personnes seules

⁵ La répartition du revenu d’après cette définition paraîtra dans la publication *Revenus des familles (Familles de recensement)*, 1975, n° 13-208 au catalogue.

individuals and families with two or more members. Table headings always specify whether families only or families and unattached individuals are included.

Head of Family

For the purposes of this report the head of a family is determined as follows: (i) in families consisting of married couples with or without children, the husband is considered the head, (ii) in single-parent families with unmarried children, the parent is the head, (iii) in single-parent families with married children, the member who is mainly responsible for the maintenance of the family becomes the head, (iv) in families where relationships are other than husband-wife or parent-child, normally the eldest in the family is considered the head.

Family Characteristics

The classification by family characteristics is based on the relationships and marital status of the family members. The major sub-category of families is husband-wife families. The remainder can be broken down into single parent families, and all other types of families. The latter group contains families consisting of two or more related adults such as brothers and sisters. Husband-wife families have been further subdivided into groups: (i) married couple only, (ii) married couple with single children only, (iii) married couple with relatives other than children only, and (iv) all other husband-wife families which consist of a married couple, married children and their families with or without single children or other relatives present.

Family Life Cycle

The classification by family life cycle is similar to that by family characteristics in that it also groups families in two major categories: husband-wife families and other families. However, in this classification, husband-wife families are further broken down by the age of the head (under 45; 45 and over) and the presence or absence of children under 16.

Family Size

The family size refers to the total number of persons in the family, as constituted at the time of the survey, including both adults and children.

Area of Residence

The classification by area of residence is based on the population size of the place where the unit resided at the time of the survey. Centres with a population of 30,000 or over are classified as “metropolitan areas” and the rest of the country as “non-metropolitan”. The latter is further divided into non-metropolitan cities

et les familles de deux membres ou plus. Dans tous les cas, les titres des tableaux précisent s’il s’agit de familles seulement ou bien de familles et de personnes seules.

Chef de famille

Aux fins de ce bulletin, le chef de famille est défini comme suit: (i) dans les familles se composant d’un couple marié avec ou sans enfants, le chef de famille est l’époux, (ii) dans les familles monoparentales avec des enfants célibataires, le chef de famille est le parent, (iii) dans les familles monoparentales avec des enfants mariés, le chef de famille est le principal soutien de la famille, (iv) dans les familles autres que les familles époux-épouse ou les familles monoparentales, le chef de famille est généralement le membre le plus âgé de la famille.

Caractéristiques des familles

La classification selon les caractéristiques des familles est basée sur les liens de parenté et l’état matrimonial des membres de la famille. La principale sous-catégorie de familles est celle des familles époux-épouse. Les autres groupes comprennent les familles monoparentales et tous les autres genres de familles. Ce dernier groupe comprend les familles dont deux membres adultes ou plus sont apparentés, comme par exemple des frères et soeurs. Les familles époux-épouse se subdivisent de la manière suivante: (i) couple marié seulement, (ii) couple marié ayant des enfants célibataires seulement, (iii) couple marié vivant avec des parents autres que des enfants seulement et (iv) toutes les autres familles époux-épouse se composant d’un couple marié, d’enfants mariés et leurs familles vivant avec ou sans enfants célibataires ou d’autres parents.

Cycle vital de la famille

La classification suivant le cycle vital de la famille s’apparente à celle suivant les caractéristiques familiales, en ce sens qu’elle regroupe les familles en deux groupes principaux: les familles époux-épouse et toutes les autres familles. Dans la présente classification, toutefois, les familles époux-épouse sont ensuite décomposées selon l’âge du chef de famille (moins de 45 ans, 45 ans et plus) et selon qu’il y a ou non des enfants de moins de 16 ans.

Taille de la famille

La taille de la famille représente le nombre total de personnes (adultes et enfants) dans la famille lors de l’enquête.

Catégorie d’habitat

La classification par catégorie d’habitat est établie d’après le degré de concentration de la population dans la région où vivait l’unité participante lors de l’enquête. Les centres urbains de 30,000 habitants et plus sont classés dans la catégorie “régions métropolitaines” et le reste du pays dans la catégorie “régions non métropolitaines”.

(with a population between 15,000 and 30,000), small urban areas (under 15,000), and rural areas. This classification is based on the 1971 Census classification of areas.

Labour Force Status and Related Concepts

Classifications are based on the individual's (or family head's) status at the time of the survey — spring 1976. This is not necessarily the same as the status during the year 1975 for which income data were collected. The only variable that directly refers to a person's work experience during 1975 is the "number of weeks worked".

Occupation

The classification of occupations is now based on the standards developed for the 1971 Census.⁶ Because of sample limitations, the 21 major occupation groups are combined into 10 groups as follows:

1. *Managerial*: managerial, administrative and related occupations.

2. *Professional*: occupations in natural sciences, engineering and mathematics; occupations in social sciences and related fields; occupations in religion; teaching and related occupations; occupations in medicine and health; artistic, literary, recreational and related occupations.

3. *Clerical*: clerical and related occupations.

4. *Sales*: sales occupations.

5. *Service*: service occupations.

6. *Farming, etc.*: farming, horticulture and animal husbandry occupations; fishing, hunting, trapping and related occupations; forestry and logging occupations.

7. *Processing and machining*: processing occupations; machining and related occupations; mining and quarrying including oil and gas field occupations.

8. *Product fabrication, etc.*: product fabricating, assembling and repairing occupations.

Cette dernière catégorie est ventilée de la façon suivante: villes non métropolitaines (dont la population se chiffre entre 15,000 et 30,000 habitants), petites régions urbaines (moins de 15,000) et régions rurales. Cette classification est fondée sur la classification des régions du recensement de 1971.

Situation vis-à-vis de l'activité et concepts connexes

Les classifications sont fondées sur la situation du particulier ou du chef de famille au moment de l'enquête, c'est-à-dire au printemps de 1976. Cette situation n'est pas nécessairement la même qu'en 1975, année pour laquelle on a recueilli des données sur le revenu. La seule variable qui se rapporte directement aux antécédents de travail de 1975 est "le nombre de semaines travaillées".

Profession

La classification selon les professions est maintenant fondée sur les normes établies pour le recensement de 1971⁶. En raison des limitations de l'échantillon, les 21 principaux groupes professionnels sont ramenés aux 10 groupes suivants:

1. *Direction*: directeurs, administrateurs et personnel assimilé.

2. *Professions libérales*: travailleurs des sciences naturelles, techniques et mathématiques, travailleurs spécialisés des sciences sociales et secteurs connexes, membres du clergé et assimilés, enseignants et personnel assimilé, personnel médical, techniciens de la santé et travailleurs assimilés, professionnels des domaines artistique et littéraire, travailleurs des loisirs et personnel assimilé.

3. *Travail administratif*: personnel administratif et travailleurs assimilés.

4. *Commerce*: travailleurs spécialisés dans la vente.

5. *Services*: travailleurs spécialisés dans les services.

6. *Agriculture, etc.*: agriculteurs, horticulteurs et éleveurs; pêcheurs, chasseurs, trappeurs et travailleurs assimilés; travailleurs forestiers et bûcherons.

7. *Traitement et usinage des matières premières*: travailleurs des industries de transformation, usineurs et travailleurs connexes; mineurs, carriers, foreurs de puits et travailleurs assimilés.

8. *Fabrication, etc.*: travailleurs spécialisés dans la fabrication, le montage et les réparations.

⁶ For details, see *Occupational Classification Manual, Census of Canada, 1971*, based on *Canadian Classification and Dictionary of Occupations, Volume II*, Catalogue 12-538.

⁶ Pour plus de détails, voir *La classification des professions, recensement du Canada, 1971*, inspiré de la *Classification et Dictionnaire canadiens des professions, volume II*, n° 12-538 au catalogue.

9. *Construction*: construction trades occupations.

10. *Transport, etc.*: transport equipment operation occupations, materials handling and related occupations; other crafts and equipment operating occupations.

This new classification system was first used in the 1972 income report. Since in earlier reports the occupation-related data were based on different standards, they cannot be compared with corresponding 1972 and later estimates.⁷

Income and its Components

Total Income

The total income of a unit consists of income from the following sources:

1. *Wages and salaries*: gross wages and salaries before deduction for such items as income taxes, unemployment insurance and pension funds, and excluding fringe benefits. Commission income received by salesmen as well as occasional earnings for babysitting, for delivering papers, for cleaning, etc., are also included in this category. All income in kind such as meals or living accommodation is excluded.

Where individuals received military pay in the form of reserve army pay, and where this was a minor part of total income, such income was combined with wages and salaries.

2. *Net income from self-employment*: net income (gross income minus expenses) earned from self-employment either on own account or in partnership in an unincorporated business or in independent professional practice. Included here is net income from operating a farm.

Net income from farming was to be reported by individuals who operated their own or a rented farm either on own account or in partnership. Field instructions specified that net income was to be calculated by subtracting farm operating expenses and depreciation of farm assets from farm cash receipts. The latter were to include all money receipts from the sale of farm products including supplementary and assistance payments from governments. Income in kind is excluded.

⁷ The relationship between the old and new occupational classifications is analysed in *The Labour Force, August 1973*, Catalogue 71-001.

9. *Construction*: travailleurs du bâtiment.

10. *Transport, etc.*: personnel d'exploitation des transports, manutentionnaires et travailleurs assimilés; autres ouvriers qualifiés et conducteurs de machines.

Ce nouveau système de classification a d'abord été utilisé dans le bulletin sur le revenu pour 1972. Puisque, dans les bulletins précédents, les données portant sur la profession étaient fondées sur des normes différentes, elles ne peuvent pas être comparées aux estimations correspondantes pour 1972 et les années suivantes⁷.

Revenu et composantes du revenu

Revenu total

Le revenu total d'une unité comprend les revenus provenant des sources suivantes:

1. *Salaires et traitements*: montant brut des salaires et traitements, avant toute retenue pour l'impôt sur le revenu, l'assurance-chômage et les régimes de retraite, à l'exclusion des avantages sociaux. Les commissions des vendeurs ainsi que les revenus occasionnels pour la garde d'enfants, la livraison de journaux à domicile, les travaux de ménage, etc., sont également compris dans cette catégorie. Tous les revenus en nature, comme les repas ou le logement, sont exclus.

La solde des militaires de réserve, lorsqu'elle ne constitue qu'une part peu importante du revenu, a été ajoutée aux salaires et traitements.

2. *Revenu net provenant d'un emploi autonome*: revenu net (revenu brut moins les dépenses) gagné à titre de travailleur indépendant établi à son propre compte ou associé soit dans une entreprise non constituée en société, soit par l'exercice privé d'une profession. Est également compris le revenu net provenant de l'exploitation d'une ferme.

Les particuliers qui exploitent leur propre ferme ou une ferme louée, que ce soit pour leur propre compte ou à titre d'associés, devaient déclarer le revenu net provenant de cette activité. Les instructions de l'enquête précisaient qu'il fallait calculer le revenu net en soustrayant du revenu agricole en espèces les dépenses d'exploitation ainsi que l'amortissement du matériel agricole et des bâtiments. Le revenu pécuniaire devait comprendre tous les revenus en espèces provenant de la vente de produits agricoles, y compris les indemnités supplémentaires et les crédits accordés par l'État. Les revenus en nature étaient exclus.

⁷ La relation entre l'ancienne et la nouvelle classification des professions est analysée dans *La population active, août 1973*, n° 71-001 au catalogue.

3. *Net income from roomers and boarders*: the survey collected gross rather than net receipts from roomers and boarders since the estimation of net income in this instance is difficult; during editing, net income from this source was assumed to be one third of gross receipts. Payments for room and board received from relatives were not included in income of the person receiving such payments.

4. *Investment income*: bond interest, dividends, mortgage interest, net rents, estate income, bank interest and other investment income.

5. *Government transfer payments*: all social welfare payments from federal, provincial and municipal governments such as Family Allowances, Old Age Security, Guaranteed Income Supplement, pensions under Canada and Quebec Pension Plans, unemployment insurance benefits, workmen's compensation, training allowances, veterans' pensions and allowances, mothers' allowances, pensions to the blind and the disabled. Family Allowances are treated as part of the income of the parent or guardian who claimed an income tax exemption for the children concerned.

6. *Pensions*: retirement pensions, annuities and superannuation.

7. *Miscellaneous income*: scholarships, alimony and other items not specified or included in the above categories.

Earned Income

The sum of wages and salaries and net income from self-employment is defined as earned income or earnings.

Major Source of Income

This classification involves a comparison of amounts received from seven sources of total income, as defined above. The largest component is designated as the *major source of income*. For tabulation purposes, some major source categories were combined under one heading. For example, recipients who reported either wages and salaries or net income from self-employment as their major source were grouped under the heading *earned income*. Similarly, recipients who reported investment income, government transfer payments, pensions or miscellaneous income as their major source were grouped under the heading *other money income*. Note that individuals and family units whose major source of income was military pay and allowances, are excluded from all tabulations.

3. *Revenu net provenant de l'hébergement de chambreurs et de pensionnaires*: les données recueillies aux fins de l'enquête portaient non pas sur le revenu net mais sur le revenu brut provenant de l'hébergement de chambreurs et de pensionnaires car il est difficile d'établir une estimation du revenu net dans de tels cas; on a établi au cours de la préparation du bulletin, que le revenu net provenant de cette source s'élevait à un tiers du revenu brut. Les paiements versés pour chambre et pension par des personnes vivant chez des parents n'ont pas été compris dans le revenu de la personne qui recevait ces paiements.

4. *Revenu de placements*: intérêts d'obligations, dividendes, intérêts hypothécaires, loyer net, revenu foncier, intérêts bancaires et autres revenus de placements.

5. *Transferts du gouvernement*: les indemnités de bien-être versées par les gouvernements fédéral et provinciaux et les municipalités, telles que les allocations familiales, pensions de vieillesse, le supplément du revenu garanti, les pensions versées par le Régime de pensions du Canada et le Régime des rentes du Québec, les prestations d'assurance-chômage, l'indemnisation des accidentés du travail, les allocations d'apprentissage, les allocations et pensions d'anciens combattants, les allocations aux mères nécessiteuses, les pensions d'aveugles et d'invalides. Les allocations familiales sont comprises dans le revenu du père, de la mère, du tuteur ou de la tutrice qui a demandé une exemption fiscale pour les enfants en cause.

6. *Pensions*: pensions de retraite et rentes.

7. *Revenus divers*: bourses d'études, pensions alimentaires et autres revenus non précisés ou compris dans les catégories ci-dessus.

Revenu gagné

Le revenu gagné, ou gains, équivaut à la somme des salaires et traitements et du revenu net provenant d'un emploi autonome.

Source principale de revenu

Cette classification implique une comparaison des sommes provenant de sept sources de revenu total, selon la définition donnée plus haut. On désigne la plus grande composante par *source principale de revenu*. Aux fins des totalisations, on a regroupé certaines grandes composantes sous la même rubrique. Par exemple, les personnes qui ont déclaré les salaires et traitements ou le revenu net provenant d'un emploi autonome comme leur principale source de revenu étaient groupées sous la rubrique *revenu gagné*. De même, les personnes qui ont déclaré des revenus de placement, des transferts du gouvernement, des pensions ou des revenus divers comme leur principale source de revenu étaient groupées sous la rubrique *autre revenu monétaire*. Il est à noter que les particuliers et les unités familiales dont la principale source de revenu provenait d'une solde et d'indemnités militaires étaient exclus de toutes les totalisations.

Receipts Not Counted as Income

Gambling gains and losses, money inherited during the year in a lump sum, capital gains or losses, receipts from the sale of property or personal belongings, income tax refunds (including provincial income tax credits), loans received, loans repaid to an individual as the lender, lump sum settlements of insurance policies, and rebates of property taxes and other taxes were excluded as well as all income in kind such as free meals, living accommodation, or food and fuel produced on own farm.

Family Income

Family income is defined to consist of incomes received by all individuals 15 years of age and over who at the time of the survey formed one economic family. Income data were collected from each member and considered to be part of the family's income even if, in some cases, certain family members belonged to another family unit for the whole or part of the preceding calendar year. Also, no recall or adjustment was made to account for income of persons who were members of the family for part of the year and who left because of marriage, death or other reasons.

Income Tables

The tables are presented in three major sections. The first section contains income distributions by size, the second section is devoted to quintile tables, and the third section presents statistics on low income.

All tables exclude family units and individuals whose major source of income was military pay and allowances. Excluded also are inmates of institutions, persons residing on Indian reserves, residents of the Yukon and Northwest Territories and Canadians temporarily abroad.

Families who had immigrated to Canada during 1975 and had earned some income abroad and some in Canada were classified by their Canadian income only. Thus, some families are classified at incomes which are somewhat lower than actual receipts because income prior to arrival in Canada was not included. Income from abroad such as investment income or retirement pensions received by Canadian residents was included in the income.

Gains non comptés comme revenus

Sont exclus du revenu: les gains et pertes au jeu, une somme globale héritée au cours de l'année, les gains ou les pertes de capital, le produit de la vente de propriété ou de biens personnels, les remboursements d'impôt sur le revenu (y compris les crédits d'impôt provincial), les prêts reçus, les prêts remboursés à un particulier agissant comme prêteur, les règlements forfaitaires en matière d'assurance, les remboursements de l'impôt foncier ou d'autres impôts ainsi que les avantages en nature comme les repas gratuits et les facilités de logement ou encore la nourriture et le combustible produits sur sa propre ferme.

Revenu de la famille

Le revenu de la famille se compose de tous les revenus reçus par tous les particuliers âgés de 15 ans et plus qui, lors de l'enquête, constituaient une famille économique. Les données sur le revenu ont été recueillies auprès de chaque membre et considérées comme portant sur le revenu de la famille même si, dans certains cas, certains membres de la famille avaient appartenu à une autre unité familiale au cours de toute l'année civile précédente ou d'une partie de cette année. En outre, on n'a effectué aucun retrait ou ajustement pour tenir compte du revenu des personnes qui ont été membres de la famille pendant une partie de l'année et qui ont cessé d'en faire partie pour cause de mariage, de décès ou de toute autre raison.

Tableaux sur le revenu

Les tableaux sont présentés dans trois sections principales. La première contient les répartitions du revenu par taille, la deuxième a pour objet les données par quintile et la troisième présente des statistiques sur les personnes à faible revenu.

Les unités familiales et les particuliers qui tirent leur principale source de revenu d'une solde et d'indemnités militaires sont exclus de tous les tableaux. Sont également exclus les pensionnaires d'institutions, les personnes vivant dans une réserve indienne, au Yukon et dans les Territoires du Nord-Ouest ainsi que les Canadiens vivant à l'étranger de façon temporaire.

Les familles qui ont immigré au Canada pendant l'année 1975 et dont le revenu a été gagné en partie à l'étranger et en partie au Canada ont été classées en fonction de leur revenu canadien seulement. C'est ainsi que certaines familles sont classées à un niveau de revenu inférieur à leurs gains réels parce que leur revenu antérieur à leur arrivée au Canada n'a pas été compris. Les revenus de l'étranger, revenus de placements et de pensions de retraite, par exemple, touchés par des résidents canadiens sont compris.

It should be noted that estimates by the **area of residence** are not directly comparable to similar estimates in earlier reports, since the 1966 Census classification of areas had been previously used. Also affected is Table 5, where distributions by selected metropolitan areas are presented. In addition to changes resulting from the updated area classification, the Hamilton-Burlington distribution contains a minor heading change. Earlier tables based on the 1966 Census classification referred to this selected area as "Hamilton", even though the city of Burlington was included. The 1971 Census classifies the area as "Hamilton-Burlington", which is the term now used in the table.

The classifications by **education** have been modified to maintain consistency with currently released Labour Force statistics. In Tables 11, 31, 58, 69, 70, 78 and 79, five categories are now used: 0 to 8 years (0 to 8 years of primary and secondary education completed); some high school and no post-secondary (9 to 13 years of primary and secondary education completed); some post-secondary (attended a post-secondary institution, university or non-university, but did not receive a degree, certificate or diploma); post-secondary certificate or diploma (received a certificate or diploma from a post-secondary institution, university or non-university); and university degree. Similar tabulations in previous reports contained eight categories: elementary schooling, 0 to 4 years completed and 5 to 8 years completed; secondary schooling, some and completed; non-university, some and completed; and university, some (including receipt of diploma or certificate) and completed with degree.

Tables 22, 59 and 60 contain three new education categories: 0 to 8 years (as defined above); secondary and post-secondary (some high school and no post-secondary, some post-secondary and post-secondary certificate or diploma); and university degree. Previously, these tabulations were classified by: elementary school or less (0 to 4 years and 5 to 8 years completed); secondary schooling (secondary school some and completed, non-university some and completed); and university (some and completed).

Tabulations classified by **tenure** have been revised so that now two instead of three categories are used. The definition of "owners" remains unchanged, while the classifications "renters" and "other" used previously have been combined under the heading "renters". "Other" included roomers, lodgers and family units and individuals who received free lodging or who resided with employers. Tables 21, 33, 42, 78 and 79 incorporate this revision.

Il faut remarquer que les estimations par **catégorie d'habitat** ne sont pas directement comparables avec les estimations similaires des bulletins précédents puisque nous utilisons auparavant la classification des régions du recensement de 1966. Le tableau 5, qui présente la répartition pour certaines régions métropolitaines, est également affecté. En plus des changements résultant de la mise à jour des catégories d'habitat, il faut noter qu'une modification mineure a été apportée au titre de la répartition pour Hamilton-Burlington. Les tableaux précédents, basés sur la classification du recensement de 1966, désignaient cette région sous le nom de "Hamilton" même si elle comprenait la ville de Burlington. Le recensement de 1971 utilise la désignation "Hamilton-Burlington" qui sera désormais employée dans le tableau.

Les catégories selon l'**instruction** ont été modifiées pour conserver l'uniformité de nos données avec les chiffres de la population active qui sont publiés actuellement. Les tableaux 11, 31, 58, 69, 70, 78 et 79 utilisent maintenant cinq catégories: 0 à 8 années (0 à 8 années d'études primaires et secondaires); quelques études secondaires et aucune étude postsecondaire (9 à 13 années d'études primaires et secondaires); quelques études postsecondaires (fréquentation d'un établissement postsecondaire, universitaire ou non, mais sans grade, certificat ou diplôme); certificat ou diplôme postsecondaire (certificat ou diplôme d'un établissement postsecondaire, universitaire ou non); et degré universitaire. Les tableaux correspondants des éditions précédentes comprenaient huit catégories: cours primaire, 0 à 4 ans et 5 à 8 ans; cours secondaire, non terminé et terminé; études non universitaires, non terminées et terminées; et cours universitaire, non terminé (y compris avec diplôme ou certificat) et cours universitaire terminé avec grade.

Les tableaux 22, 59 et 60 comprennent trois nouvelles catégories: 0 à 8 ans (catégorie définie précédemment); cours secondaire et études postsecondaires (quelques études secondaires et aucune étude postsecondaire, quelques études postsecondaires et certificat ou diplôme postsecondaire); et degré universitaire. Ces tableaux se subdivisaient auparavant en cours primaire ou moins (0 à 4 années et 5 à 8 années); cours secondaire (cours secondaire non terminé et terminé, études non universitaires non terminées et terminées); et cours universitaire (non terminé et terminé).

Les tableaux selon le **mode d'occupation** utilisent maintenant deux catégories plutôt que trois. La définition de la rubrique "propriétaires" demeure la même tandis que les catégories "locataires" et "autres" ont été fusionnées sous la rubrique "locataires". La rubrique "autres" groupait les chambreurs et les unités familiales et les particuliers logés gratuitement ou habitant chez l'employeur. Les tableaux 21, 33, 42, 78 et 79 tiennent compte de cette modification.

In several tables **net income from roomers and boarders** is combined with and appears under the heading "net income from self-employment" (Tables 25, 34, 46, 66, 68 and 73) or "earnings" (Tables 22, 31 and 70). The category "earners", in Tables 19, 24, 43, 69, 78 and 79, includes recipients of earnings or net income from roomers and boarders. Similarly, in Tables 44, 45, 64, 65, 66, 69, 70, 71, 74, 75, 76, 78 and 79 the major source category "net income from self-employment" includes units whose major source of income consists of net income from roomers and boarders.

The composition of income category **other money income** only includes the income sources pensions and miscellaneous income (Tables 25, 34, 46, 66, 68 and 73) while the major source category "other money income" also includes investment income and government transfer payments.

Section I. Income Distributions by Size

This section consists of four parts: Tables 1 to 25 show income distributions for families, Tables 26 to 34 for unattached individuals, Tables 35 to 46 for all units (families and unattached individuals combined), and Tables 47 to 66 for individuals income recipients aged 15 years and over.

Estimated aggregate income of all units in Table 45 is not identical with aggregate income of individuals in Table 65. There are some conceptual explanations for this difference; for example, individuals whose income came mainly from military pay and allowances were removed from the individual estimates whereas all families and unattached individuals whose major source was military pay and allowances were excluded from estimates for all units. These two exclusions account for different amounts of aggregate income. However, it is recognized that such minor conceptual differences do not provide an adequate explanation for the entire difference; discrepancies between the two independent weighting schemes must account for most of the differential.

Section II. Quintile Tables

This section is divided into two parts: Tables 67 to 71 provide data on families and unattached individuals, and Tables 72 to 77 on individuals with income.

Quintile data were compiled by ranking weighted survey returns in ascending order by size of total income (in current dollars). Then the array was divided into five equal parts or quintiles.

Dans plusieurs tableaux, le **revenu net provenant de l'hébergement de chambreurs et de pensionnaires** est compris dans les rubriques "revenu net d'un emploi autonome" (tableaux 25, 34, 46, 66, 68 et 73) ou "gains" (tableaux 22, 31 et 70). La catégorie "personnes gagnant un revenu" des tableaux 19, 24, 43, 69, 78 et 79 comprend les personnes qui bénéficient d'un revenu gagné ou d'un revenu net provenant de l'hébergement de chambreurs et de pensionnaires. De même, dans les tableaux 44, 45, 64, 65, 66, 69, 70, 71, 74, 75, 76, 78 et 79, la principale source de revenu "revenu net d'un emploi autonome", comprend les unités dont le revenu provenant de l'hébergement de chambreurs et de pensionnaires constitue la principale source de revenu.

La composante de revenu **autre revenu monétaire** comprend seulement les pensions et les revenus divers (tableaux 25, 34, 46, 66, 68 et 73) tandis que la principale source de revenu "autre revenu monétaire" comprend également les revenus de placements et les transferts du gouvernement.

Section I. Répartition du revenu selon la taille du revenu

La section comprend quatre parties: les tableaux 1 à 25 donnent les répartitions du revenu pour les familles, les tableaux 26 à 34, celles pour les personnes seules, les tableaux 35 à 46, celles pour l'ensemble des unités (personnes seules et familles réunies), et les tableaux 47 à 66, celles pour les particuliers de 15 ans et plus recevant un revenu.

L'estimation du revenu agrégatif de l'ensemble des unités (tableau 45) n'équivaut pas au revenu agrégatif des particuliers (tableau 65). Cet écart tient à certaines différences d'ordre théorique; par exemple, les particuliers dont le revenu principal provenait d'une solde et d'indemnités militaires ont été exclus des estimations relatives aux particuliers tandis que toutes les familles et personnes seules dont le revenu principal provenait d'une solde et d'indemnités militaires ne sont pas comprises dans les estimations pour l'ensemble des unités; cette double exclusion explique la différence entre les revenus agrégatifs. On admet cependant que ces différences mineures d'ordre conceptuel n'expliquent pas entièrement l'écart causé dans une grande mesure par les différentes méthodes de pondération utilisées.

Section II. Les tableaux par quintile

La section est divisée en deux parties: les tableaux 67 à 71 présentent des données sur les familles et les personnes seules et les tableaux 72 à 77, sur les particuliers ayant un revenu.

Les données quintiles ont été élaborées en classant les résultats pondérés de l'enquête par ordre ascendant selon le montant du revenu total (en dollars courants). On a ensuite divisé la série en cinq parties égales ou quintiles.

The exercise of determining quintile points and tabulating each of the five quintiles by different characteristics was performed in the individual series separately for: male income recipients, female income recipients, all individuals in receipt of income, and wage-earners (persons whose major source of income was wages and salaries).

In the family unit series quintiles were identified and tabulated for: unattached individuals, families, and all units (unattached individuals and families combined). It should be noted that the ranking of units was performed independently (for these three populations) and the resulting data, e.g., for "all units" in the lowest quintile, are not simply the addition of families in the first quintile and unattached individuals in the first quintile. The same is true of "all individuals" — the data by quintiles are not a summation of "males" and "females" within the same quintiles.

Section III. Statistics on Low Income

Data on low income are to be found in Tables 78 and 79.

Statistics Canada has employed low income cut-offs since 1961. The original lines were selected on the basis that urban families with incomes below these limits usually spent 70% or more of their income on the basic necessities of food, shelter and clothing and were, thus, left with very little discretionary income.⁸ Until recently these limits had only been adjusted by the rise in the Consumer Price Index. However based on an analysis of 1969 Family Expenditure data, these limits have been revised to reflect more recent consumption patterns of Canadian families. As the overall ratio spent on food, shelter and clothing had declined, families who on average spent 62% or more of their income on the basic necessities were considered to be in straitened circumstances. These revised limits have also been differentiated by size of area of residence in addition to family size.⁹

On a déterminé les points quintiles et calculé les cinq quintiles selon différentes caractéristiques dans chacune des séries suivantes: hommes ayant un revenu, femmes ayant un revenu, tous les particuliers ayant un revenu et salariés (personnes dont le revenu provient principalement de salaires et traitements).

Dans les séries d'unités familiales, les quintiles ont été identifiés et calculés pour les personnes seules, les familles et l'ensemble (personnes seules et familles). Il convient de signaler que l'ordre des unités a été établi séparément pour ces trois groupes; les données obtenues, c'est-à-dire pour "l'ensemble des unités" dans le quintile inférieur, ne représentent donc pas simplement l'addition des familles et des personnes seules du quintile inférieur. Il en va de même pour "l'ensemble des particuliers" dont les données par quintile ne sont pas la somme des "hommes" et "femmes" des même quintiles.

Section III. Faibles revenus

Les données sur les personnes à faible revenu figurent dans les tableaux 78 et 79.

Statistique Canada emploie les seuils de faible revenu depuis 1961. Les limites originales étaient fixées en fonction du critère suivant: les familles urbaines dont le revenu se situait en deça de ces limites consacraient généralement 70 % ou plus de leur revenu aux besoins fondamentaux que sont l'alimentation, le logement et le vêtement, c'est-à-dire qu'il leur restait très peu pour les dépenses non obligatoires⁸. Jusqu'à récemment, ces limites n'ont été ajustées qu'en fonction de la hausse de l'Indice des prix à la consommation. Cependant, à la suite d'une analyse des données de 1969 sur les dépenses de la famille, ces limites ont été révisées afin de tenir compte des habitudes de consommation plus récentes des familles canadiennes. Comme, en général, la proportion du revenu consacrée à l'alimentation, au logement et au vêtement avait diminué, les familles qui dépensaient en moyenne 62 % ou plus de leur revenu pour se procurer des biens nécessaires étaient considérées comme étant dans le besoin. Ces limites révisées ont également été établies selon la taille de la catégorie d'habitat et selon la taille de la famille⁹.

⁸ For an explanation of how these levels were established see: J. R. Podoluk, *Incomes of Canadians*, Queen's Printer, 1968, p. 185. The original cut-offs for 1961 were:

| | Dollars |
|---------------------|---------|
| 1 person | 1,500 |
| 2 persons | 2,500 |
| 3 " | 3,000 |
| 4 " | 3,500 |
| 5 + " | 4,000 |

⁹ For a more detailed discussion of the analysis underlying these revised cut-offs an unpublished paper "Revision of Low Income Cut-offs" is available on request.

⁸ Pour plus de détails sur la définition de ces niveaux, voir J.R. Podoluk, *Incomes of Canadians*, Imprimeur de la Reine, 1968, p. 185. Les seuils originaux en 1961 étaient:

| | Dollars |
|-----------------------|---------|
| 1 personne | 1,500 |
| 2 personnes | 2,500 |
| 3 " | 3,000 |
| 4 " | 3,500 |
| 5 + " | 4,000 |

⁹ Pour un exposé plus détaillé de l'analyse qui a mené à ces seuils révisés, un ouvrage non publié qui s'intitule "Revision of Low Income Cut-offs" est disponible sur demande.

Revised low income cut-offs for 1975 are given in the following table.

Les seuils de faible revenu révisés pour 1975 sont présentés dans le tableau suivant.

Low Income Cut-offs of Family Units, 1975
Seuils de faible revenu des unités familiales, 1975

| Size of family unit — Taille de l'unité familiale | Revised low income cut-offs — Seuils de faible revenu révisés | | | | |
|---|---|----------------------|--------------------|--|---|
| | Size of area of residence — Taille de la catégorie d'habitat | | | | |
| | 500,000 and over — et plus | 100,000 - 499,999 | 30,000 - 99,999 | Less than 30,000 ¹ — Moins de 30,000 ¹ | Rural areas — Régions rurales |
| | dollars | | | | |
| 1 person — personne | 3,829 | 3,584 | 3,481 | 3,202 | 2,783 |
| 2 persons — personnes | 5,549 | 5,197 | 5,046 | 4,641 | 4,038 |
| 3 “ “ | 7,081 | 6,632 | 6,437 | 5,924 | 5,150 |
| 4 “ “ | 8,422 | 7,886 | 7,655 | 7,044 | 6,124 |
| 5 “ “ | 9,414 | 8,814 | 8,558 | 7,876 | 6,849 |
| 6 “ “ | 10,335 | 9,677 | 9,396 | 8,644 | 7,516 |
| 7 or more persons — personnes ou plus. | 11,333 | 10,608 | 10,301 | 9,476 | 8,240 |

¹ Includes non-metropolitan cities (with a population between 15,000 and 30,000) and small urban areas (under 15,000). — Comprend les villes non métropolitaines (dont la population se chiffre entre 15,000 et 30,000 habitants) et les petites régions urbaines (moins de 15,000).

PART IV – INDIVIDUALS WITH INCOME

Table

47. Percentage Distribution of Individuals by Income Groups in Current and Constant (1971) Dollars for Selected Years.
48. Percentage Distribution of Individuals by Income Groups, Provinces and Metropolitan and Non-metropolitan Areas, 1975.
49. Percentage Distribution of Individuals Residing in Non-metropolitan Areas by Income Groups, Regions and Area of Residence, 1975.
50. Percentage Distribution of Individuals whose Major Source of Income is Wages and Salaries by Income Groups, Provinces and Metropolitan and Non-metropolitan Areas, 1975.
51. Percentage Distribution of Individuals by Income Groups, Provinces and Sex, 1975.
52. Percentage Distribution of Individuals by Income Groups, Regions, Age and Sex, 1975.
53. Percentage Distribution of Individuals whose Major Source of Income is Wages and Salaries by Income Groups, Age and Sex, 1975.
54. Percentage Distribution of Individuals by Income Groups, Employment Status and Sex, 1975.
55. Average Income of Individuals by Weeks Worked, Employment Status and Sex, 1975.
56. Percentage Distribution of Individuals by Income Groups, Sex and Number of Weeks Worked During 1975.
57. Percentage Distribution of Individuals by Income Groups, Occupation and Sex, 1975.
58. Percentage Distribution of Individuals by Income Groups, Education and Sex, 1975.
59. Percentage Distribution of Individuals by Income Groups, Regions, Education and Sex, 1975.
60. Percentage Distribution of Individuals whose Major Source of Income is Earned Income by Income Groups, Age and Education, 1975.
61. Percentage Distribution of Individuals by Income Groups and Year of Immigration, 1975.
62. Percentage Distribution of Individuals by Income Groups, Age, Sex and Marital Status, 1975.
63. Percentage Distribution of Individuals by Income Groups and Relationship to Head of Family, 1975.

PARTIE IV – PARTICULIERS AYANT UN REVENU

Tableau

47. Répartition en pourcentage des particuliers selon la tranche de revenu en dollars courants et constants (1971) pour certaines années.
48. Répartition en pourcentage des particuliers selon la tranche de revenu et la province, régions métropolitaines et non métropolitaines, 1975.
49. Répartition en pourcentage des particuliers résidents des régions non métropolitaines selon la tranche de revenu, la région économique et la catégorie d'habitat, 1975.
50. Répartition en pourcentage des particuliers dont la principale source de revenu consiste en salaires et traitements, selon la tranche de revenu et la province, régions métropolitaines et non métropolitaines, 1975.
51. Répartition en pourcentage des particuliers selon la tranche de revenu, la province et le sexe, 1975.
52. Répartition en pourcentage des particuliers selon la tranche de revenu, la région, l'âge et le sexe, 1975.
53. Répartition en pourcentage des particuliers dont la principale source de revenu consiste en salaires et traitements, selon la tranche de revenu, l'âge et le sexe, 1975.
54. Répartition en pourcentage des particuliers selon la tranche de revenu, le statut d'activité et le sexe, 1975.
55. Revenu moyen des particuliers selon le nombre de semaines travaillées, le statut d'activité et le sexe, 1975.
56. Répartition en pourcentage des particuliers selon la tranche de revenu, le sexe et le nombre de semaines travaillées en 1975.
57. Répartition en pourcentage des particuliers selon la tranche de revenu, la profession et le sexe, 1975.
58. Répartition en pourcentage des particuliers selon la tranche de revenu, l'instruction et le sexe, 1975.
59. Répartition en pourcentage des particuliers selon la tranche de revenu, la région, l'instruction et le sexe, 1975.
60. Répartition en pourcentage des particuliers dont la principale source de revenu est le revenu gagné, selon la tranche de revenu, l'âge et l'instruction, 1975.
61. Répartition en pourcentage des particuliers selon la tranche de revenu et l'année d'immigration, 1975.
62. Répartition en pourcentage des particuliers selon la tranche de revenu, l'âge, le sexe et l'état matrimonial, 1975.
63. Répartition en pourcentage des particuliers selon la tranche de revenu et le lien avec le chef de famille, 1975.

**PART IV – INDIVIDUALS WITH
INCOME – Concluded**

Table

64. Distribution of Individuals (Number and Per Cent) by Income Groups and Major Source of Income, 1975.
65. Distribution of Aggregate Income of Individuals (Amount and Per Cent) by Income Groups and Major Source of Income, 1975.
66. Composition of Income of Individuals by Income Groups and Major Source of Income, 1975.

**PARTIE IV – PARTICULIERS AYANT
UN REVENU – fin**

Tableau

64. Répartition des particuliers (absolue et en pourcentage) selon la tranche de revenu et la principale source de revenu, 1975.
65. Répartition du revenu agrégatif des particuliers (absolue et en pourcentage) selon la tranche de revenu et la principale source de revenu, 1975.
66. Composition du revenu des particuliers selon la tranche de revenu et selon la principale source de revenu, 1975.

(1) NON-METROPOLITAN AREAS ARE DIVIDED INTO : NON-METROPOLITAN CITIES (WITH A POPULATION BETWEEN 15,000 AND 30,000), SMALL URBAN AREAS (UNDER 15,000), AND RURAL AREAS.
LES REGIONS NON METROPOLITAINES SONT VENTILEES DE LA FACON SUIVANTE : VILLES NON METROPOLITAINES (DONT LA POPULATION SE CHIFFRE ENTRE 15,000 ET 30,000 HABITANTS), PETITES REGIONS URBAINES (MOINS DE 15,000) ET REGIONS RURALES.

(1) THIS TABLE EXCLUDES ALL INDIVIDUALS WHO WERE NOT IN THE LABOUR FORCE AT THE TIME OF THE SURVEY.

CE TABLEAU FAIT ABSTRACTION DE TOUS LES PARTICULIERS INACTIFS AU MOMENT DE L'ENQUETE

(2) THESE ARE WEEKS WORKED IN EITHER FULL-TIME OR PART-TIME EMPLOYMENT.

NOMBRE DE SEMAINES DE TRAVAIL A PLEIN TEMPS OU A TEMPS PARTIEL.

(3) SEE FOOTNOTE (1), TABLE 54.

VOIR LA NOTE (1) DU TABLEAU 54.

(4) COMPLETE DATA ARE NOT GIVEN FOR THIS CLASSIFICATION BECAUSE THE SAMPLE WAS INADEQUATE TO PROVIDE RELIABLE ESTIMATES.

CE CLASSEMENT NE COMPREND PAS TOUTES LES DONNEES, CAR L'ECHANTILLON ETAIT INADEQUAT POUR FOURNIR DES ESTIMATIONS FIABLES.

TABLE 56. PERCENTAGE DISTRIBUTION OF INDIVIDUALS BY INCOME GROUPS, SEX AND NUMBER OF WEEKS WORKED DURING 1975

(1) FAMILY UNITS WERE CLASSIFIED BY THE HEAD'S EMPLOYMENT STATUS AT THE TIME OF THE SURVEY. THIS IS NOT NECESSARILY THEIR EMPLOYMENT STATUS DURING 1975.
LE CLASSEMENT DES UNITES FAMILIALES SELON LE STATUT D'ACTIVITE DU CHEF A ETE ETABLI AU MOMENT DE L'ENQUETE. IL NE S'AGIT DONC PAS NECESSAIREMENT DU STATUT D'ACTIVITE EN 1975.

PART II – INDIVIDUALS WITH INCOME

Table

72. Upper Limits of Income Quintiles of Individuals and Percentage Distribution of Total Income of Individuals by Quintiles for Selected Years.
73. Percentage Composition of Income of Individuals Within Income Quintiles, 1975.
74. Percentage Distribution of Individuals by Selected Characteristics Within Income Quintiles, 1975.
75. Percentage Distribution of Males by Selected Characteristics Within Income Quintiles, 1975.
76. Percentage Distribution of Females by Selected Characteristics Within Income Quintiles, 1975.
77. Percentage Distribution of Wage-earners by Selected Characteristics Within Income Quintiles, 1975.

PARTIE II – PARTICULIERS AYANT UN REVENU

Tableau

72. Limites supérieures des quintiles du revenu des particuliers et répartition en pourcentage du revenu total des particuliers par quintile pour certaines années.
73. Composition proportionnelle du revenu des particuliers dans chaque quintile de revenu, 1975.
74. Répartition en pourcentage des particuliers selon certaines caractéristiques dans chaque quintile de revenu, 1975.
75. Répartition en pourcentage des hommes selon certaines caractéristiques dans chaque quintile de revenu, 1975.
76. Répartition en pourcentage des femmes selon certaines caractéristiques dans chaque quintile de revenu, 1975.
77. Répartition en pourcentage des salariés selon certaines caractéristiques dans chaque quintile de revenu, 1975.

(2) FAMILY UNITS WERE CLASSIFIED BY THE HEAD'S EMPLOYMENT STATUS AT THE TIME OF THE SURVEY. THIS IS NOT NECESSARILY THE EMPLOYMENT STATUS DURING 1975.

LE CLASSEMENT DES UNITES FAMILIALES SELON LE STATUT D'ACTIVITE DU CHEF A ETE ETABLI AU MOMENT DE L'ENQUETE. IL NE S'AGIT DONC PAS NECESSAIREMENT DU STATUT D'ACTIVITE EN 1975.
(3) A FULL-TIME WORKER IS AN INDIVIDUAL WHO WORKED 50-52 WEEKS DURING 1975 AND WORKED THE NORMAL HOURS FOR THE PARTICULAR OCCUPATION. THE "LESS THAN FULL-TIME" CATEGORY INCLUDES ALL INDIVIDUALS WHO WORKED DURING 1975 BUT NOT FULL-TIME AS DEFINED ABOVE. UN EMPLOYE A PLEIN TEMPS EST UNE PERSONNE QUI A TRAVAILLE DE 50 A 52 SEMAINES EN 1975 PENDANT UN NOMBRE D'HEURES NORMAL POUR L'EMPLOI EN CAUSE. LA CATEGORIE "MOINS QU'A PLEIN TEMPS" COMPREND TOUTES LES PERSONNES QUI ONT TRAVAILLE EN 1975, MAIS PAS A PLEIN TEMPS SUIVANT LA DEFINITION PRECISEE.

SOURCES AND METHODS

Income estimates presented in this report are based on information collected from a sample of Canadian households in April 1976.

Sample

The 1976 Survey of Consumer Finances used the full April 1976 Labour Force Survey Sample. For a detailed description of the sample design see Catalogue 71-526, *Canadian Labour Force Survey, Methodology* which will be released shortly.

The sample represents all families and individuals in Canada with the exception of the following: (i) residents of Yukon and Northwest Territories, (ii) members of households located on Indian reserves, and (iii) inmates of institutions.¹

The sample consisted of 38,257 dwellings. However 3,687 of them were vacant. The 34,570 occupied dwellings contained 36,864 family units. Complete income information was received from 26,871 units which constitutes a 72.9% **response rate**. The following table presents provincial response rates by type of area.

¹ Institutions such as prisons, penitentiaries, jails, reformatories, mental hospitals, TB hospitals, sanatoriums, orphanages, homes for the aged.

SOURCES ET MÉTHODES

Les estimations du revenu présentées dans ce bulletin sont fondées sur les renseignements recueillis au mois d'avril 1976 auprès d'un échantillon de ménages canadiens.

Échantillonnage

L'enquête de 1976 sur les finances des consommateurs a utilisé l'échantillon complet de l'enquête d'avril 1976 sur la population active. Pour une description détaillée du plan de sondage, consulter la publication de Statistique Canada intitulée *Enquête sur la population active du Canada (Méthodologie)*, n° 71-526 au catalogue, qui paraîtra prochainement.

L'échantillon représente l'ensemble des familles et des particuliers au Canada sauf: (i) les résidents du Yukon et des Territoires du Nord-Ouest, (ii) les membres de ménages dans les réserves indiennes, et (iii) les pensionnaires d'institutions¹.

L'échantillon se composait de 38,257 logements. À ce chiffre correspondaient 3,687 logements vacants. Les 34,570 logements occupés contenaient 36,864 unités familiales. On a pu recueillir des renseignements complets sur le revenu de 26,871 unités familiales ce qui donne un **taux de réponse** de 72.9 %. Le tableau suivant présente les taux de réponse par province selon le genre de secteur.

¹ Prisons, pénitenciers, maisons d'arrêt, maisons de correction, hôpitaux pour malades mentaux, hôpitaux pour tuberculeux, sanatoriums, orphelinats et maisons pour vieillards.

Response Rates by Province and Type of Area, 1975
Taux de réponse selon la province et le genre de secteur, 1975

| Province | Type of area — Genre de secteur | | | |
|--|---|--|-------------------------------------|-------|
| | Urban areas 15,000 and over — Agglomérations urbaines de 15,000 habitants et plus | Small urban areas — Petites régions urbaines | Rural areas — Régions rurales | Total |

| Canada | 71.1 | 75.0 | 75.7 | 72.9 |

Another 1,195 family units supplied partial information; these records were not used in the family series but at least one individual in each such unit provided usable income information for individual income series. In total, there were 48,665 individuals 15 years of age and over who reported cash income for 1975. The remaining 8,798 family units either refused to complete the questionnaire, were unable to supply the information or simply could not be contacted by the enumerators.

En outre, 1,195 unités familiales ont fourni des renseignements partiels; ces résultats n'ont pas été utilisés dans la série sur la famille. Toutefois, au moins une personne dans chaque unité a fourni des renseignements utilisables pour la série sur les particuliers. Un total de 48,665 particuliers âgés de 15 ans et plus ont déclaré un revenu monétaire pour 1975. Les 8,798 unités familiales restantes ont refusé de remplir le questionnaire, ou n'ont pas été en mesure de fournir les renseignements demandés ou encore n'ont pas pu être rejointes par les agents enquêteurs.

In the present report, tables are based on 26,593 family units and 48,324 individual income recipients. The minor discrepancy between the satisfactory schedules collected and the records utilized in tabulations is accounted for by exclusion of family units and individuals whose major source of income was military pay and allowances.

Les tableaux du bulletin portent sur 26,593 unités familiales et sur 48,324 particuliers ayant touché un revenu. La petite différence entre le nombre de questionnaires acceptables recueillis et le nombre de questionnaires utilisés dans l'établissement des tableaux est due au fait que les unités familiales et les particuliers dont la principale source de revenu provenait d'une solde et d'indemnités militaires ont été exclus du champ d'observation.

The exclusion of individuals 14 years old in this survey can only be evaluated using data from the previous survey. In 1974, the average income of individuals 14 years of age and over was \$7,416, while the exclusion of 14 year olds, representing .5% of all 1974 individual income recipients, increased the average by \$35. For males, the average rose \$46 from \$9,749 to \$9,795, while for females, the increase was \$21 from \$4,255 to \$4,276.

On ne peut évaluer l'effet de l'exclusion des particuliers âgés de 14 ans du champ de cette enquête qu'en utilisant les données de l'enquête précédente. En 1974, le revenu moyen des particuliers âgés de 14 ans et plus s'élevait à \$7,416; l'exclusion des particuliers de 14 ans, représentant .5% de l'ensemble des particuliers bénéficiaires d'un revenu en 1974, a haussé la moyenne de \$35. Chez les hommes, la moyenne a progressé de \$46, passant de \$9,749 à \$9,795 tandis que chez les femmes, elle a augmenté de \$21, soit de \$4,255 à \$4,276.

Percentage Distribution of Individuals by Income Groups and Age, 1974
Répartition en pourcentage des particuliers selon la tranche de revenu et l'âge, 1974

| Income group — Tranche de revenu | All age groups — Ensemble des groupes d'âge | | 19 and under — et moins | |
|---|--|-----------------------------|-------------------------------|---------|
| | 14 and over — et plus | 15 and over — et plus | 14 - 19 | 15 - 19 |
| Under \$500 — Moins de \$500 | 5.3 | 5.0 | 23.6 | 20.9 |
| \$ 500 - \$ 999 | 4.2 | 4.2 | 19.2 | 19.4 |
| 1,000 - 1,499 | 5.7 | 5.7 | 14.2 | 14.5 |
| 1,500 - 1,999 | 4.5 | 4.5 | 9.6 | 10.1 |
| 2,000 - 2,999 | 11.1 | 11.1 | 12.6 | 13.3 |
| 3,000 - 3,999 | 7.0 | 7.1 | 7.4 | 7.8 |
| 4,000 - 4,999 | 6.6 | 6.7 | 5.0 | 5.3 |
| 5,000 - 5,999 | 6.6 | 6.6 | 3.6 | 3.8 |
| 6,000 - 6,999 | 6.1 | 6.1 | 2.1 | 2.2 |
| 7,000 - 7,999 | 5.4 | 5.4 | 1.1 | 1.1 |
| 8,000 - 8,999 | 5.2 | 5.2 | 0.5 | 0.5 |
| 9,000 - 9,999 | 5.1 | 5.1 | 0.4 | 0.5 |
| 10,000 - 11,999 | 8.6 | 8.6 | 0.4 | 0.4 |
| 12,000 - 14,999 | 8.2 | 8.2 | 0.2 | 0.2 |
| 15,000 and over — et plus | 10.4 | 10.4 | 0.0 | 0.0 |
| Total | 100.0 | 100.0 | 100.0 | 100.0 |
| Average income — Revenu moyen \$ | 7,416 | 7,451 | 1,871 | 1,952 |
| Median income — Revenu médian \$ | 5,833 | 5,871 | 1,254 | 1,335 |
| Sample size — Taille de l'échantillon | 22,481 | 22,354 | 2,447 | 2,320 |
| Standard error of average income — Erreur type du revenu moyen \$ | 58 | 58 | 45 | 45 |

In terms of the income distributions, the impact of the exclusion of 14 year olds is minimal. One of the most affected categories is obviously the “19 years and under” age grouping. In 1974, the 14 year olds represented 5.0% of the individuals in the “19 years and under” group. However, the general shape of this distribution is not changed by the exclusion of 14 year olds. The table on the preceding page illustrates the effect of the removal of 14 year olds on the percentage distribution for the “19 years and under” age category.

The exclusion of 14 year olds affected the averages and distributions in the family income series even less. A more detailed study will be available upon request.

Data Collection

The enumeration procedures used in this survey followed the pattern of earlier income surveys. Information on all household members was recorded on control cards and income questionnaires were left in households for completion by each member 15 years of age and over. Questionnaires were picked up by enumerators a few days later. In cases where income data had not been obtained, a further attempt to solicit this information was made by mail. Data on labour force characteristics of the surveyed population were obtained from the April 1976 Labour Force Survey.

The questionnaires used in this survey are reproduced at the end of this report.

Methods of Estimation

Following clerical and computer edit of collected data, weights were applied to sample records in order to obtain final survey estimates. Two separate weighting operations, both based on the ratio estimation principle, were carried out, one for family units, and the other for individuals. For this purpose, the number of family units was independently estimated from the Census and various other Statistics Canada sources, separately for each province. In the case of individuals, Labour Force Survey estimates were used. With the independent estimates, the sampling ratios, compensation for non-response and other sample design refinements were used to produce a final weight for each sample record. This was done separately for each classification category in a province.

Family units were weighted by family size (whether unattached individual or a family of two or more), sex of the unit head, and labour force status of the head (whether paid worker, self-employed – non-farm, self-employed – farm, not in the labour force).

En ce qui a trait à la répartition du revenu, l'effet de l'exclusion des particuliers de 14 ans est minime. L'une des catégories les plus touchées est évidemment le groupe des “19 ans et moins”. En 1974, les particuliers de 14 ans intervenaient pour 5.0% du groupe des “19 ans et moins”. L'exclusion des particuliers de 14 ans n'a cependant pas modifié la courbe générale de la répartition au niveau de ce groupe. Le tableau de la page précédente illustre l'effet de l'exclusion des particuliers âgés de 14 ans sur la répartition en pourcentage dans la catégorie des “19 ans et moins”.

L'exclusion des particuliers de 14 ans a eu un effet encore moins marqué sur les moyennes et les répartitions au niveau de la série sur le revenu de la famille. On pourra obtenir sur demande une étude beaucoup plus détaillée.

Collecte des données

Les méthodes de dénombrement employées dans cette enquête sont identiques à celles des enquêtes précédentes sur le revenu. Les renseignements sur tous les membres du ménage ont été notés sur les cartes de contrôle et on a laissé dans les ménages des questionnaires sur le revenu que devait remplir chaque membre du ménage âgé de 15 ans et plus. Les questionnaires ont été recueillis quelques jours plus tard par les agents enquêteurs. Dans les cas où l'on n'a pu obtenir de données sur le revenu, on a tenté une seconde fois d'obtenir ces renseignements par la poste. Les données sur les caractéristiques de la population active enquêtée proviennent de l'enquête d'avril 1976 sur la population active.

Les questionnaires utilisés au cours de cette enquête sont présentés à la fin de la publication.

Méthodes d'estimation

Après un contrôle manuel et informatique des données recueillies, on a pondéré les chiffres de l'échantillon pour obtenir les estimations finales de l'enquête. On a fait deux pondérations distinctes, fondées sur des estimations par ratio: l'une pour les unités familiales et l'autre pour les particuliers. À cette fin, le nombre d'unités familiales a été estimé pour chaque province en tenant compte des données du recensement et d'autres sources de Statistique Canada. Dans le cas des particuliers, les estimations de l'Enquête sur la population active ont été utilisées. Outre les estimations indépendantes, les fractions de sondage, la compensation des non-réponses et certaines modifications du plan de sondage ont servi à produire une pondération définitive pour chacun des documents utilisables, et ce pour chacune des catégories de classification dans une province.

Les **unités familiales** ont été pondérées par la taille de la famille (personne seule ou famille de deux personnes ou plus), le sexe du chef de ménage et la situation par rapport à la population active du chef de ménage (travailleur rémunéré, travailleur indépendant non agricole, travailleur indépendant agricole, inactif).

Individuals in the labour force were weighted by sex and labour force status (paid worker – employed, paid worker – unemployed, self-employed – non-farm, self-employed – farm, unpaid worker). Individuals who were not in the labour force at the time of the survey were weighted on the basis of age and sex. Persons less than 15 years of age were excluded from weighting – no income data were collected from them. After the weights were applied, records of respondents with zero income were removed from the tape.

Reliability of Estimates

The estimates in this report are based on a *sample* of households. Somewhat different figures might have been obtained if a complete census had been taken using the same questionnaires, interviewers, supervisors, processing, etc., as those actually used in this survey. This difference is due to the *sampling error* of the estimate. Sampling errors are a function of the sample design, of the sample size, and of the variability in the population.

In addition, the estimates are subject to *non-sampling errors* which are present whether a sample or a complete census is taken. These errors result from non-response, response errors and a multitude of other errors which may be classified as processing errors. Non-sampling errors can be minimized by a high response rate, effective questionnaire design and control over interview procedures and processing.

Errors Due to Non-response

It is inevitable that during a survey some people cannot be found at home, others are on holidays, and others refuse to divulge any information. These individuals are called non-respondents. Studies indicate that the incidence of non-response is associated with such family characteristics as size of family, tenure, labour force status of head and age. When considering individuals, income non-response tends to be related to such factors as sex, labour force status and size of family. At the present time, there is no evidence to suggest that this leads to a significant difference in the distribution of individuals and families by income levels for non-respondents as opposed to respondents.

The weighting procedure is designed as well to compensate for some of the effects of non-response as it takes into consideration the relative importance of groups with different characteristics.

Les **particuliers** qui faisaient partie de la population active ont été pondérés en fonction du sexe et de la situation par rapport à la population active (travailleur rémunéré occupé, travailleur rémunéré en chômage, travailleur indépendant non agricole, travailleur indépendant agricole, travailleur non rémunéré). Le nombre de particuliers qui ne faisaient pas partie de la population active lors de l'enquête a été pondéré suivant l'âge et le sexe. La pondération n'a pas pris en compte les personnes âgées de moins de 15 ans car aucune donnée sur le revenu n'avait été recueillie sur ces personnes. Après la pondération, les documents des répondants qui n'avaient aucun revenu ont été enlevés de la bande.

Fiabilité des estimations

Les estimations présentées ici sont fondées sur un *échantillon* de ménages. On aurait pu obtenir des chiffres légèrement différents si on avait fait un recensement complet à l'aide des mêmes questionnaires, des mêmes enquêteurs, des mêmes méthodes d'exploitation, etc., que ceux qu'on a effectivement utilisés pour cette enquête. Cette différence est due à l'*erreur d'échantillonnage*. Les erreurs d'échantillonnage sont fonction du plan de sondage, de la taille de l'échantillon et de l'évolution démographique.

De plus, les estimations peuvent contenir des *erreurs qui ne sont pas dues au sondage* et qui peuvent entacher aussi bien un petit sondage qu'un recensement exhaustif. Ces erreurs proviennent des refus de répondre, des réponses fausses et d'un grand nombre d'autres erreurs de dépouillement. Les erreurs qui ne sont pas dues à l'échantillonnage peuvent être réduites par un haut taux de réponse, un questionnaire bien conçu et un contrôle des méthodes d'interview et du dépouillement.

Erreurs dues à la non-réponse

Il est inévitable qu'au cours d'une enquête, certaines personnes ne soient pas chez elles, et que d'autres soient en vacances ou refusent catégoriquement de fournir le moindre renseignement. Ce sont les non-répondants. Des études indiquent que la fréquence des cas de non-réponse est associée à des caractéristiques familiales comme la taille de la famille, le mode d'occupation, la situation du chef vis-à-vis l'activité et l'âge. Pour les particuliers, les non-réponses concernant le revenu tendent à se rattacher à des facteurs comme le sexe, la situation vis-à-vis l'activité et la taille de la famille. Actuellement, rien ne prouve qu'il en résulte une différence importante dans la répartition des particuliers et des familles selon les revenus entre les non-répondants et les répondants.

Aussi, les méthodes de pondération servent à compenser certains effets de la non-réponse car elles tiennent compte de l'importance relative des groupes qui présentent des caractéristiques différentes.

Response Error

To be able to provide accurate information, it is essential that a respondent can recall accurately certain past facts about his income, should understand the questions asked and be honest in his answers. If, for one of these or any other reason, an inaccurate response is recorded than an individual response error has been introduced. If individual response errors occur in a systematic way, then estimates would be biased and even if the response errors are randomly distributed with zero mean, estimates are less reliable.

It is suspected that some income components such as investment income and certain types of transfer payments may be less accurately reported than other sources of income. (Non-response is another factor that may contribute to the underestimation of these particular income components.)

Sampling Error

The sampling error, mentioned earlier, is not known. A statistic, called the **standard error**, can however be estimated from sample data itself. The standard error of an estimate is a *statistical measure* of its sampling error. It also partially measures the effect of non-sampling errors, but does not reflect any systematic biases in the data. The estimation of standard errors in this survey has been patterned after the corresponding Labour Force Survey model.

The **standard error of average income** is provided for most distributions in this report. It can serve as a rough indicator of the precision² of the corresponding estimate of average income, if interpreted as shown below. The chances are about 68 out of 100 that the difference between a sample estimate of average income and corresponding census figure would be less than the standard error. The chances are about 95 out of 100 that the difference would be less than twice the standard error and about 99 out of 100 that it would be less than two and one half times as large. For example, the standard error of average income for families in the Atlantic Provinces is given in Table 2 as \$344 and the estimated average income is \$13,474. The estimated average income plus/minus twice the standard error will contain 95% of the time the average obtained if the total population were enumerated, i.e., the 95% confidence interval for average family income in the Atlantic Provinces is the range from \$12,786 to \$14,162.

² It should be noted that "accurate" and "precise" estimates have different meanings statistically. A precise estimate is not necessarily accurate since significant bias may result in a low standard error about the measured mean but a higher standard error about the "true" mean that was desired to be estimated. This is another reason why one must be so concerned with non-sampling errors.

Erreur de réponse

Pour que l'enquête puisse fournir des renseignements exacts, il est essentiel qu'il se souvienne bien de certains faits à propos de son revenu, qu'il comprenne dans quel esprit ces renseignements sont recueillis et qu'il réponde en toute sincérité. Si, pour une raison ou une autre, il donne une réponse inexacte, il introduit par le fait même une erreur "individuelle". Si ce type d'erreur se produit de façon systématique, les estimations seront biaisées et, même si les erreurs de réponse sont distribuées selon un modèle aléatoire à moyenne nulle, les estimations seront moins fiables.

On estime que certaines composantes de revenu, comme le revenu de placements et certains genres de transferts, peuvent faire l'objet de déclarations moins exactes que celles sur d'autres genres de revenu. (La non-réponse est un autre facteur qui peut contribuer à la sous-estimation de ces composantes particulières.)

Erreur d'échantillonnage

L'erreur d'échantillonnage, mentionnée ci-dessus, n'est pas connue. Toutefois, il est possible d'estimer une statistique, appelée l'**erreur type**, à partir des données mêmes du sondage. L'erreur type d'une estimation est une *mesure statistique* de son erreur d'échantillonnage. Elle mesure aussi partiellement l'effet des erreurs non dues à l'échantillonnage, mais ne reflète pas les biais systématiques. Aux fins de cette enquête, l'estimation de l'erreur type suit le modèle utilisé à l'égard de l'Enquête sur la population active.

L'**erreur type du revenu moyen** est donnée pour la plupart des répartitions dans ce bulletin. Selon l'interprétation faite plus bas, elle sert d'indicateur grossier de la précision² avec laquelle le revenu moyen a été estimé. Il y a une probabilité de 68 % que la différence entre une estimation fondée sur un échantillon et le chiffre réel correspondant soit inférieure à l'erreur type. Il y a une probabilité de 95 % que la différence soit moins de deux fois l'erreur type et d'environ 99 % qu'elle soit moins de deux fois et demie l'erreur type. Par exemple, l'erreur type du revenu moyen des familles dans les provinces de l'Atlantique donnée dans le tableau 2 est de \$344 et l'estimation du revenu moyen est de \$13,474. Comme l'estimation du revenu moyen plus ou moins deux erreurs types contiendra dans 95 cas sur 100 la moyenne que l'on aurait obtenue en dénombrant la population totale, on pourra dire que l'intervalle de confiance de 95 % pour le revenu moyen des familles des provinces de l'Atlantique se situe entre \$12,786 et \$14,162.

² Il faut noter que "estimation exacte" et "estimation précise" ont des significations différentes dans le domaine de la statistique. L'estimation précise n'est pas nécessairement exacte, car un biais important peut donner une petite erreur type de la moyenne mesurée mais une erreur type plus importante dans la moyenne "réelle" que l'on désirait estimer. C'est là une autre raison de ne pas oublier les erreurs qui ne sont pas dues à l'échantillonnage.

The standard errors of percentages could also be estimated in a similar manner. However, due to the high cost associated with their estimation and inclusion in the report, it was found preferable to offer another approach. It is based on evidence that errors for percentages derived from a stratified clustered sample tend to be up to twice as large as those obtained from a simple random sample of the same size. Statement A, which gives approximate estimates of errors of percentages for different sample sizes, is based on this assumption. Thus, referring again to Table 2, the \$14,000 - \$14,999 income class contains 5.0% of all families in British Columbia. This estimate was determined from a sample of 2,106 cases (also from Table 2). From Statement A, an estimate of 5% based on a sample size of 2,000 has an approximate standard error of 1.0%. Consequently, the 95% confidence interval for the percentage of families in the \$14,000 - \$14,999 income class is 3.0% to 7.0% (5.0% \pm 2 x 1.0%).

Il est également possible de calculer les erreurs types des pourcentages d'une façon semblable. Toutefois, en raison du coût élevé de l'estimation et l'introduction de ces erreurs dans le bulletin, on a jugé préférable de choisir une autre approche. Celle-ci est fondée sur le principe que les erreurs de pourcentage provenant d'un échantillon stratifié en grappe tendent à être jusqu'à deux fois plus importantes que celles provenant d'un échantillon aléatoire simple de même taille. Se basant sur cette hypothèse, l'état A donne des estimations approximatives d'erreurs de pourcentages pour différentes tailles d'échantillon. Donc, pour revenir au tableau 2, 5.0 % de l'ensemble des familles de la Colombie-Britannique se trouvent dans la tranche de revenu de \$14,000 - \$14,999. Cette estimation a été faite d'après un échantillon de 2,106 cas (voir tableau 2). Dans l'état A, l'estimation de 5 % basée sur un échantillon de 2,000 présente une erreur type d'environ 1.0 %. Il en résulte que l'intervalle de confiance de 95 % pour le pourcentage des familles dans la tranche de revenu de \$14,000 - \$14,999 varie entre 3.0 % et 7.0 % (5.0 % \pm 2 x 1.0 %).

STATEMENT A. Approximate Standard Errors of Percentages¹

ÉTAT A. Estimation des erreurs types de pourcentages¹

| Sample size ² n Taille de l'échantillon ² n | Percentage of units having a characteristic Pourcentage d'unités présentant une caractéristique | | | | | | | |
|--|--|--------------------|--------------------|---------------------|---------------------|---------------------|---------------------|------|
| | 1 or — ou 99 | 2 or — ou 98 | 5 or — ou 95 | 10 or — ou 90 | 15 or — ou 85 | 25 or — ou 75 | 40 or — ou 60 | 50 |
| 100 | | | 4.4 | 6.0 | 7.2 | 8.6 | 9.8 | 10.0 |
| 200 | | 2.0 | 3.2 | 4.2 | 5.0 | 6.2 | 7.0 | 7.0 |
| 300 | | 1.6 | 2.6 | 3.4 | 4.2 | 5.0 | 5.6 | 5.8 |
| 400 | 1.0 | 1.4 | 2.2 | 3.0 | 3.6 | 4.4 | 4.8 | 5.0 |
| 500 | 0.9 | 1.3 | 2.0 | 2.6 | 3.2 | 3.8 | 4.4 | 4.4 |
| 600 | 0.8 | 1.1 | 1.8 | 2.4 | 3.0 | 3.6 | 4.0 | 4.0 |
| 700 | 0.8 | 1.1 | 1.7 | 2.2 | 2.8 | 3.2 | 3.8 | 3.8 |
| 800 | 0.7 | 1.0 | 1.6 | 2.2 | 2.6 | 3.0 | 3.4 | 3.6 |
| 1,000 | 0.6 | 0.9 | 1.4 | 1.9 | 2.2 | 2.8 | 3.0 | 3.2 |
| 1,500 | 0.5 | 0.8 | 1.1 | 1.5 | 1.9 | 2.2 | 2.6 | 2.6 |
| 2,000 | 0.4 | 0.6 | 1.0 | 1.3 | 1.6 | 1.9 | 2.2 | 2.2 |
| 2,500 | 0.4 | 0.6 | 0.9 | 1.2 | 1.4 | 1.7 | 2.0 | 2.0 |
| 3,000 | 0.4 | 0.5 | 0.8 | 1.1 | 1.3 | 1.6 | 1.8 | 1.8 |
| 5,000 | 0.3 | 0.4 | 0.6 | 0.8 | 1.0 | 1.2 | 1.4 | 1.4 |
| 7,500 | 0.2 | 0.3 | 0.5 | 0.7 | 0.8 | 1.0 | 1.1 | 1.1 |
| 10,000 | 0.2 | 0.3 | 0.4 | 0.6 | 0.7 | 0.9 | 1.0 | 1.0 |
| 15,000 | 0.2 | 0.2 | 0.4 | 0.5 | 0.6 | 0.7 | 0.8 | 0.8 |
| 20,000 | 0.1 | 0.2 | 0.3 | 0.4 | 0.5 | 0.6 | 0.7 | 0.7 |

¹ This table is derived from the formula $2 \sqrt{\frac{PQ}{n}}$ where P = the percentage of the population with a given characteristic, Q = 100 - P and n is the sample size.

Thus on the assumption that standard errors for the estimates in this publication are twice as large as those in simple random sampling from a binomial population then each entry in this table would equal approximately the standard error of the estimate. - Ce tableau a été établi d'après la formule $2 \sqrt{\frac{PQ}{n}}$, où P représente le pourcentage de la population présentant une caractéristique déterminée, Q = 100 - P, et n représente la taille de l'échantillon. Si l'on admet donc que les estimations de la présente publication sont affectées d'erreurs types deux fois plus grandes que s'il s'agissait d'un échantillonnage aléatoire simple parmi une population binomiale, chacun des chiffres de ce tableau devrait être à peu près égal à l'erreur type d'estimation.

² For sample sizes greater than 20,000, if n is multiplied by 100 the sampling error is divided by 10. Generally, if n is multiplied by "a", then the sampling error is divided by \sqrt{a} . - Pour les tailles d'échantillons supérieures à 20,000, si on multiplie par 100, l'erreur d'échantillonnage est divisée par 10. En règle générale, si on multiplie n par "a", l'erreur d'échantillonnage est divisée par \sqrt{a} .

To assist in calculating confidence intervals for percentages most tables have the sample sizes provided. However, it was found inconvenient to insert sample sizes in a few tables where percentage distributions are given within income classes. These are provided in this section in Statements B and C. It should be noted that

Pour faciliter le calcul des intervalles de confiance des pourcentages, la taille d'échantillon est inscrite dans la plupart des tableaux. On a cependant jugé peu pratique d'insérer la taille de l'échantillon dans certains tableaux où la répartition en pourcentage est donnée dans chaque tranche de revenu. On la fournit dans les états B et C de la

the distribution of the sample by income classes is not the same as the weighted distribution because each unit does not have the same weight attached to it. The method of weighting is described in "Methods of Estimation".

présente section. Il faut noter que la répartition de l'échantillon par tranche de revenu ne correspond pas à la répartition pondérée; en effet, les unités n'ont pas toutes le même poids. On trouvera une description de la méthode de pondération sous le titre "Méthodes d'estimation".

STATEMENT B. Sample Sizes for Families and Unattached Individuals by Income Groups, 1975
ÉTAT B. Tailles des échantillons pour les familles et personnes seules, par tranche de revenu, 1975

| Income group — Tranche de revenu | Unattached individuals — Personnes seules | Families — Familles | All families and unattached individuals — Ensemble des familles et des personnes seules |
|--|---|---------------------------|---|
| Under \$1,000 — Moins de \$1,000 | 456 | | |
| \$ 1,000 - \$ 1,499 | 240 | 360 | 1,341 |
| 1,500 - 1,999 | 285 | | |
| 2,000 - 2,999 | 1,206 | 292 | 1,498 |
| 3,000 - 3,999 | 685 | 556 | 1,241 |
| 4,000 - 4,999 | 392 | 764 | 1,156 |
| 5,000 - 5,999 | 397 | 973 | 1,370 |
| 6,000 - 6,999 | 372 | 851 | 1,223 |
| 7,000 - 7,999 | 342 | 804 | 1,146 |
| 8,000 - 8,999 | 298 | 860 | 1,158 |
| 9,000 - 9,999 | 274 | 803 | 1,077 |
| 10,000 - 10,999 | | 979 | 1,212 |
| 11,000 - 11,999 | 400 | 1,020 | 1,187 |
| 12,000 - 12,999 | | 1,006 | 1,181 |
| 13,000 - 13,999 | 400 | 985 | 1,103 |
| 14,000 - 14,999 | | 962 | 1,069 |
| 15,000 - 16,999 | | 1,847 | 1,995 |
| 17,000 - 19,999 | 388 | 2,256 | 2,379 |
| 20,000 - 24,999 | | 2,569 | 2,629 |
| 25,000 and over — et plus | | 2,571 | 2,628 |
| Total | 6,135 | 20,458 | 26,593 |

STATEMENT C. Sample Sizes for Individuals by Income Groups and Sex, 1975
ÉTAT C. Tailles des échantillons pour les particuliers par tranche de revenu et selon le sexe, 1975

| Income group — Tranche de revenu | Male — Hommes | Female — Femmes | Total |
|--|---------------------|-----------------------|--------|

Relationship of Income Estimates to the National Accounts

The income concept used in this report is similar to the money income received by private households as measured in the personal income series in "National Accounts, Income and Expenditure". Personal income is the total current income of individuals and private non-commercial institutions, such as charitable organizations and universities.³ Personal income includes imputed income as well as monetary income. Among the imputed items are labour income received in kind, imputed rents of owner-occupied houses, and imputed banking services to individuals. Furthermore, some of the income components of the personal income series are not received directly by families and individuals during the year. Among such items are employer contributions to social security and pension funds, the investment income of life insurance companies and the investment income of industrial pension funds. The inclusion of such items in the National Accounts introduces differences in concepts between the Accounts and this survey. On the other hand, certain income components included in the income definition used here have no equivalent in the personal income series. Examples are annuity income and retirement pensions.

Besides differences in concepts, the two series also differ as to coverage. The survey estimates exclude income of families and persons whose income originates mainly in military pay and allowances and also incomes of inmates of institutions, persons residing on Indian reserves, Canadian residents temporarily abroad and families resident in the Yukon and Northwest Territories.

In aggregate, survey estimates of the comparable income components (sum of wages and salaries, net income from self-employment, investment income and transfer payments) are within 5% of the corresponding National Accounts aggregate after adjustments. As in the past, the survey estimates for some income components are better than for others. The reconciliation is very close for wages and salaries. On the other hand, some transfer payments (unemployment insurance benefits and miscellaneous government transfers) are underestimated; total transfers in aggregate account for four fifths of transfer payments in the adjusted personal income series. Investment income and net income from self-employment are also underestimated, with

Estimations du revenu et Comptes nationaux

La définition du revenu employée ici correspond à celle du revenu en espèces des ménages privés utilisée dans la série sur le revenu des particuliers de la publication "Comptes nationaux, revenus et dépenses". Le revenu des particuliers est le revenu courant global des particuliers et des établissements privés non commerciaux comme les organismes de charité et les universités³. Il englobe à la fois le revenu imputé et le revenu en espèces. Parmi les postes imputés, on trouve: le revenu du travail perçu en nature, les loyers imputés lorsque l'enquêté est propriétaire de la maison qu'il habite et les services bancaires imputés aux particuliers. En outre, certains des éléments de revenu visés par la série sur le revenu des particuliers ne sont pas directement reçus par les familles et les particuliers au cours de l'année. C'est le cas, entre autres, des cotisations patronales à la sécurité sociale et aux régimes de retraite, des revenus de placements des compagnies d'assurance et des revenus de placements des régimes de retraite de l'industrie. L'inclusion de ces postes dans les Comptes nationaux entraîne des différences de définition entre ces comptes et cette enquête. Par ailleurs, certains éléments de revenu compris dans la définition des revenus utilisée ici n'ont aucun équivalent dans les séries relatives au revenu des particuliers. À titre d'exemple, citons le revenu provenant des rentes et des pensions de retraite.

Outre les différences dans les concepts, les deux séries diffèrent également sur le plan du champ de l'enquête. Les estimations de l'enquête ne comprennent pas les familles et les personnes dont la principale source de revenu consiste en une solde et en indemnités militaires, les revenus des pensionnaires d'institutions, des personnes vivant dans les réserves indiennes, ainsi que les revenus des Canadiens établis temporairement à l'étranger et des familles vivant au Yukon et dans les Territoires du Nord-Ouest.

Les estimations d'enquête, en agrégats, des éléments de revenu comparables (total des salaires et traitements, revenu net provenant d'un emploi autonome, revenu de placements et des transferts) ne divergent pas de plus de 5 % des chiffres agrégatifs correspondants des Comptes nationaux, après ajustements. Comme par le passé, les estimations de l'enquête sont meilleures pour certains éléments du revenu que pour d'autres. L'équivalence est presque parfaite pour les salaires et traitements. Par contre, certains paiements de transfert (prestations d'assurance-chômage et divers transferts gouvernementaux) sont sous-estimés; le total des transferts, en agrégats représente quatre cinquièmes des paiements de transfert dans les séries sur le revenu personnel après ajustements. Le revenu

³ See Statistics Canada Catalogue 13-531, *National Income and Expenditure Accounts, Volume I*, and Catalogue 13-549, *National Income and Expenditure Accounts, Volume III*.

³ Voir n° 13-531 au catalogue de Statistique Canada, *Comptes nationaux des revenus et des dépenses, volume I*, et n° 13-549F au catalogue, *Les comptes nationaux des revenus et des dépenses, volume III*.

each component accounting for about three fifths of the corresponding components in the adjusted personal income series. In total, the differences may not appear to affect the end product to any substantial degree but the analytic usefulness of some of the income components is lessened because of these discrepancies.

de placements et le revenu net d'un emploi autonome sont également sous-estimés, chaque élément représentant environ trois cinquièmes des éléments correspondants dans les séries sur le revenu personnel ajusté. Au total, il peut sembler que cette différence n'exerce pas une influence considérable sur le résultat final mais certaines ventilations y perdent en utilité analytique.
